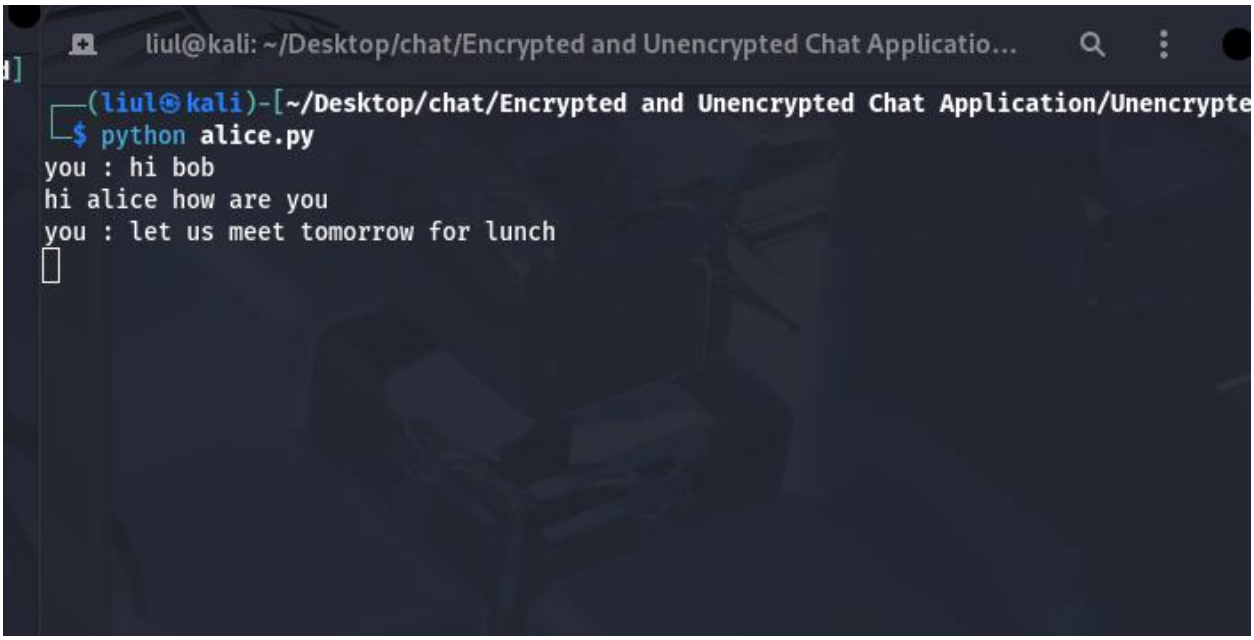
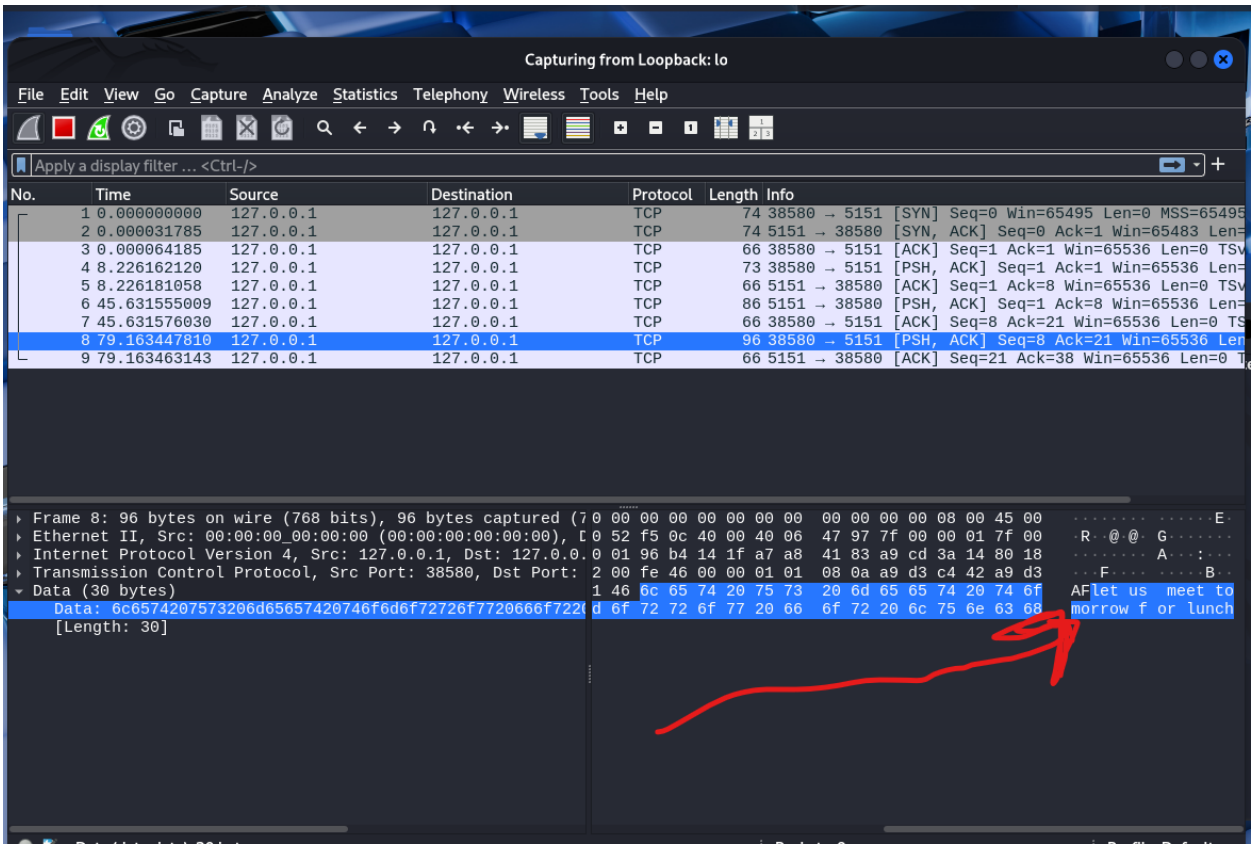
Sniffing Attack by Oscar using Wireshark

Threat actors like Oscar can use wireshark to capture network traffic and extract the data of the packet with out any hustle. If Oscar managed to make the conversation pass through his interface card by using arp spoffing and enble ip forwarding in his laptop which is in this case kali linux, reading the message is easy. There is nothing to do no GPU no bruteforce just read just like legitimate users.

This image is normal conversation between alice and bob. Alice and bob are the legitimate users of this chatting application.



This image is to demonstrate the attackers side which is Oscar.


He uses special tool called wireshark(there are also other options like tcpdump) to capture the network traffic and get the data from the packet.
